
Método dinámico: T^2 frente a m
$T^2 = p\,m + n$
$p = (1.1392 \pm 0.0034)$ s^2/kg
$n = (-0.0000 \pm 0.0010)$ s^2
$k_{\mathrm{din}} = 4\pi^2/p = 34.65$ N/m
$r = 0.99999$, $N = 4$
