
Método dinámico: T^2 vs m
$y = m\,x + n$
$m = 1.1380 \pm 0.0000$
$n = 0.0006 \pm 0.0000$
$R^2 = 1.000000$
$N = 4$
$T^2 = \frac{4\pi^2}{k}\,m$
$m_{\text{pendiente}} = 4\pi^2/k \;\Rightarrow\; k = 4\pi^2/m_{\text{pendiente}}$
$n \approx 0$
